List of Top 10 States for LEED Green Buildings Released

U.S. Green Building Council releases list of top states in the U.S. for LEED-certified projects in 2010

Washington, DC – (March 2, 2011) – The U.S. Green Building Council (USGBC) today released its 2010 list of top 10 states for LEED-certified commercial and institutional green buildings per capita, based on the U.S. 2010 Census information. The District of Columbia leads the nation, with 25 square feet of LEED-certified space per person in 2010, with Nevada being the leading state, with 10.92 square feet per person in 2010.

Other top states include New Mexico and New Hampshire and Oregon with more than 6 and 4 square feet of LEED-certified space per person, respectively.

“Using per capita, versus the more traditional numbers of projects, or pure square footage, is a reminder to all of us that the people who live and work, learn and play in buildings should be what we care about most,” said USGBC SVP of LEED, Scot Horst. “2010 was a difficult year for most of the building industry, but in many areas, the hunger for sustainable development kept the markets moving.”

The top LEED states per capita, including the District of Columbia:

- District of Columbia: 25.15 sf
- Nevada: 10.92 sf
- New Mexico: 6.35 sf
- New Hampshire: 4.49 sf
- Oregon: 4.07 sf
- South Carolina: 3.19 sf
- Washington: 3.16 sf
- Illinois: 3.09 sf
- Arkansas: 2.9 sf
- Colorado: 2.85 sf
- Minnesota: 2.77 sf

USGBC's LEED green building certification system is the foremost program for the design, construction, operation and maintenance of green buildings. Over 40,000 projects are currently participating in the commercial and institutional LEED rating systems, comprising over 7.9 billion square feet of construction space in all 50 states and 117 countries. In addition, nearly 10,000 homes have been certified under the LEED for Homes rating system, with nearly 45,000 more homes registered.

Notable newly certified projects in 2010 include the Frito Lay manufacturing site in Jonesboro, Ark.; the Wells Fargo Center in Denver, Colo.; the two International Monetary Fund (IMF) headquarters buildings in downtown Washington, D.C, which earned LEED Gold for the operations and maintenance of an existing building; Parc Huron multi-use residential property in Chicago, Ill.; the Edina Crosstown Medical Building in Edina, Minn.; Barcelona Elementary School in Albuquerque, N.M.; Centennial Hills Library in Las Vegas, Nev.; The Allison Inn & Spa in Newberg, Ore.; KPMG: Greenville in S.C.; and multiple fire stations and the Bank of America Fifth Avenue Plaza in Seattle, Wash.

###

U.S. Green Building Council

The U.S. Green Building Council is committed to a prosperous and sustainable future for our nation through cost-efficient and energy-saving green buildings.

With a community comprising 79 local affiliates, 16,000 member companies and organizations, and more than 162,000 LEED Professional Credential holders, USGBC is the driving force of an industry that is projected to contribute \$554 billion to the U.S. gross domestic product from 2009-2013. USGBC leads a diverse constituency of builders and environmentalists, corporations and nonprofit organizations, elected officials and concerned citizens, and teachers and students.

Buildings in the United States are responsible for 39% of CO₂ emissions, 40% of energy consumption, 13% water consumption and 15% of GDP per year, making green building a source of significant economic and environmental opportunity. Greater building efficiency can meet 85% of future U.S. demand for energy, and a national commitment to green building has the potential to generate 2.5 million American jobs.

LEED

The U.S. Green Building Council's LEED green building certification system is the foremost program for the design, construction, operation and maintenance of green buildings. Over 40,000 projects are currently participating in the commercial and institutional LEED rating systems, comprising over 7.9 billion square feet of construction space in all 50 states and 117 countries. In addition, nearly 10,000 homes have been certified under the LEED for Homes rating system, with nearly 45,000 more homes registered.

By using less energy, LEED-certified buildings save money for families, businesses and taxpayers; reduce greenhouse gas emissions; and contribute to a healthier environment for residents, workers and the larger community. For more information, visit www.usgbc.org.
