

| v3 - LEED 2009

## Recycled content

MRC4 | Possible 2 points

Glossary

### Intent

To increase demand for building products that incorporate recycled content materials, thereby reducing impacts resulting from extraction and processing of virgin materials.

### Requirements

Use materials with recycled content<sup>1</sup> such that the sum of postconsumer<sup>2</sup> recycled content plus 1/2 of the preconsumer<sup>3</sup> content constitutes at least 10% or 20%, based on cost, of the total value of the materials in the project. The minimum percentage materials recycled for each point threshold is as follows:

Recycled Content	Points
10%	1
20%	2

The recycled content value of a material assembly is determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

Mechanical, electrical and plumbing components, and specialty items such as elevators and equipment cannot be included in this calculation. Include only materials permanently installed in the project. Furniture may be included if it is included consistently in MR Credit 3: Materials Reuse through MR Credit 6: Certified Wood.
