

LEED ND: Built Project | v3 - LEED 2009

## Wastewater management

GIBC14 | Possible 2 points

Glossary

### Intent

To reduce pollution from wastewater and encourage water reuse.

### Requirements

Design and construct the project to retain on-site at least 25% of the average annual wastewater generated by the project (exclusive of existing buildings), and reuse that wastewater to replace potable water. An additional point may be awarded for retaining and reusing 50%. Provide on-site treatment to a quality required by state and local regulations for the proposed reuse. The percentage of wastewater diverted and reused is calculated by determining the total wastewater flow using the design case after the GIB Prerequisite 3 calculations, and determining how much of that volume is reused on-site.

Percentage of wastewater reused	Points
25%	1
50%	2
