Heat island effect: roof

SSc7.4 | Possible 1 point

Glossary

Intent

Reduce heat islands (thermal gradient differences between developed and undeveloped areas) to minimize impact on microclimate and human and wildlife habitat.

Requirements

Option 1

Use roofing materials having a Solar Reflectance Index (SRI)⁵ equal to or greater than the values in the table below for a minimum of 75% of the roof surface.

OR

Option 2

Install a vegetated roof for at least 50% of the roof area.

OR

Option 3

Install high albedo and vegetated roof surfaces that, in combination, meet the following criteria:

$(\text{Area of SRI Roof} / 0.75) + (\text{Area of vegetated roof} / 0.5) \geq \text{Total Roof Area}$
