

# Infographic: LEED in the World

Published on 3 May 2013

Posted in [LEED](#)

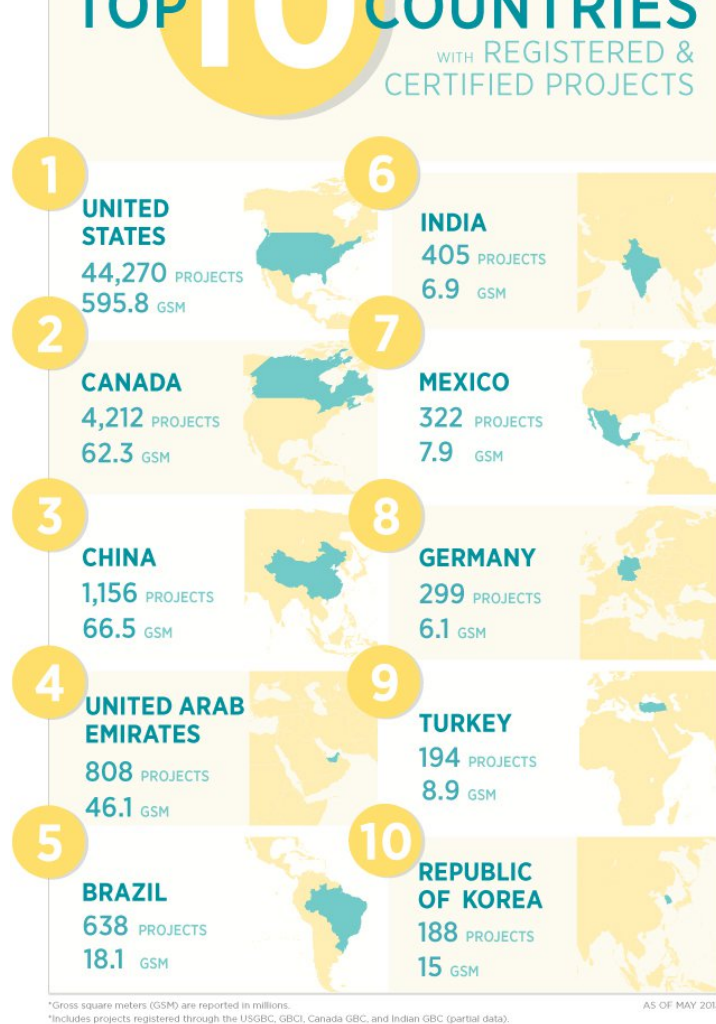

USGBC has created a new infographic, "LEED in the World," which lists the current number of both registered and certified LEED projects across the globe by gross square meters in different regions, and ranks the top 10 countries for green building.

The numbers show the explosive growth of the green building movement beyond North America, demonstrating the growing global consensus about the worldwide imperative to green the built environment.

(Figures are as of April 2013.)

Whilst it is a good infographic, I am appalled at the incorrect representation of the map of India. USGBC should exert more responsibility in such matters. If USGBC does not have a correct map outline of India, you can request it from the Consulate General of India in US. Please, could you revise the infographic to accurately represent India?

I'm wondering how these figures were derived. According the USGBC's project directory, there are only 471 projects in Brazil and 304 in Mexico as of August 2, 2013.

**Sara Samy**  
I think that's because these statistics include projects registered to USGBC, GBCI, Canada GBC and India GBC...Not only USGBC

As part of my MSc, I am researching the implementation numbers of LEED in the US. How many projects have actually been certified out of the total 44,270?

The U.S. is motivated to go green because it impacts the bottom line. Research and statistics show that Energy Star and LEED-certified buildings can attract higher rents and generate increased demand from tenants < and that a green

I am researching the major barriers to LEED certification in Brazil after the registration process. If anyone know articles over this subject in other countries, please contact-me.

60-70% of registered projects in UAE are 'On Hold' or 'Cancelled' since recession of 2009.
