

Intent

To rehabilitate damaged sites where development is complicated by environmental contamination and to reduce pressure on undeveloped land.

Requirements

Projects can achieve this point only via SS Prerequisite 2: Environmental Site Assessment and remediating site contamination.

Streamlined path available

Achievement of this credit can be documented via a LEED ND v2009 submittal. For more information [check out this article](#).

SITES-LEED Equivalency

This LEED credit (or a component of this credit) has been established as equivalent to a SITES v2 credit or component. For more information on using the equivalency as a substitution in your LEED or SITES project, see [this article](#) and [guidance document](#).
