LEED 2012 draft focuses on providing a simple-to-use, technically advanced and more robust system

Washington, DC – (Feb. 13, 2012) – The U.S. Green Building Council (USGBC) today announced that the third public comment period for the proposed 2012 update to its LEED green building program will open Mar. 1, 2012. The comment period, which will close on Mar. 20, marks the start of the LEED 2012 program delivery process.

"LEED sits at the core of the green building movement, and is critical in realizing our collective mission," said Scot Horst, Senior Vice President of LEED, USGBC. "LEED's strength comes from its continuous evolution. This continuous improvement is the outcome of thousands of technical volunteers working to develop the program and the adaptability of the program to technological and market changes."

The current draft of LEED has been refined to address technical stringency and rigor, measurement and performance tools, and an enhanced user experience. The technical changes have been informed by market data, stakeholder-generated ideas, expert engagement and advances in technology.

Additional performance-based management features will help projects measure and manage energy and water usage, site and building material selection, and indoor environmental quality.

"LEED 2012 is the next step towards a global, performance-based application," continued Horst. "In LEED 2012, a project's engagement with LEED will represent an ongoing commitment that is supported by a suite of performance management tools."

LEED 2012 extends itself as a long-term engagement tool for organizations and projects, enabling a focus on continuous improvement. Programs aimed at helping organizations use LEED to benchmark building performance in preparation for certification and for tracking performance of their buildings postcertification provides opportunities for ongoing engagement between project teams and USGBC, both before certification and after the plaque is awarded.

For LEED projects outside of the U.S., LEED 2012 will offer a new global perspective. Through modified language, new requirements and options that increase flexibility, LEED 2012 makes it easier for the international community to engage.

In an effort to redefine and enhance the user experience, LEED credit requirements have been rewritten to better align with documentation already required by the architecture and construction fields. Improvements to submittals, documentation paths and LEED Online improve LEED usability.

As the LEED program evolves to address the dynamic needs of the building industry, the development process is based on principles of transparency, openness and inclusiveness, and includes multiple comment periods where input received is incorporated into LEED. The third public comment documents, including technical refinements, scorecards and responses to comments from the previous public comment period will be available on usgbc.org/LEED2012 beginning Mar. 1. Members of the public can comment on any substantive changes made since the second public comment period, which ran from Aug. 1 through Sept. 14, 2011.

Once the comment period process concludes, LEED 2012 will be balloted in June and launch in November. To vote in the ballot, USGBC members must opt-in to the Consensus Body beginning Apr. 2. The Consensus Body is made up of employees of USGBC national member organizations in good standing, and ensures ballot participation from the full diversity of members who are using LEED in the marketplace. To be eligible to join the Consensus Body and vote in the LEED 2012 ballot, USGBC members must be in good standing by Mar. 1, and be maintained throughout the balloting period.

Members of the media are invited to a press-only webcast hosted by Doug Gatlin, VP, LEED, on Thursday, Mar. 1, 2012 at 2 p.m. ET. To register, visit bit.ly/LEED2012mediawebinar.

About U.S. Green Building Council (USGBC)

The U.S. Green Building Council (USGBC) is committed to a prosperous and sustainable future through cost-efficient and energy-saving green buildings. USGBC works toward its mission of market transformation through its LEED green building certification program, robust educational offerings, a nationwide network of chapters and affiliates, the annual Greenbuild International Conference & Expo, and advocacy in support of public policy that encourages and enables green buildings and communities. For more information, visit usgbc.org and connect on [Twitter](#), [Facebook](#) and [LinkedIn](#).

LEED

USGBC's LEED green building program is the foremost tool for the design, construction, operation and maintenance of green buildings. More than 44,600 projects are currently participating in the commercial and institutional LEED rating systems, comprising 8.3 billion square feet of construction space in all 50 states and 120 countries. In addition, nearly 18,000 homes have been certified under the LEED for Homes rating system, with more than 73,300 more homes registered. Learn more at usgbc.org.
