

PLATINUM MEMBER

STV

“Because we are designers and constructors of the built environment, we have a responsibility to do so in a sustainable manner. More importantly, it should be our legacy to future generations. The USGBC LEED Rating System is the tool that can help us to create that legacy.” - David Miles Ziskind, FAIA, NCARB, LEED® AP BD+C, Senior Vice President & Chief Architect

STV is a leading, award-winning professional firm offering engineering, architectural, planning, environmental and construction management services for the transportation, energy, institutional and commercial building, advanced technology, industrial and federal markets.

STV believes that sustainable design is “just good design.” It’s good for the environment, it’s good for the economy, and it’s good for people. Sustainability encompasses all aspects and disciplines of design working together toward a collaborative goal. As a multidisciplinary company, STV has extensive experience providing sustainable design and engineering services across a broad spectrum of building types, ranging from small support buildings to multi-million dollar laboratory facilities to billion-dollar transportation projects.

STV is committed to performing services with integrity, vision, innovation, quality and environmental sensitivity, and creating exceptional value for clients. Likewise, STV offers our diverse workforce a challenging, rewarding and stable work environment, and encouraging their professional development and continuous improvement.

STV is currently involved in LEED registered projects throughout the country. STV staff of engineers, architects, planners and construction managers includes more than 170 LEED Accredited Professionals able to shepherd projects through the certification process, from inception through occupancy and operation of the building.
